

For your safety

AirAware™

Monitoring & display of tyre pressure and temperature

WIRELESS

- Prevents from blow out due to under-inflation
- Reduces risk of accident
- Participates to fuel economy and better tyre life
- Prevents from slow loss of pressure

Schrader

pressure to perfection

On the road, your safety is increased with tyre pressure perfectly adapted to your vehicle.

With last generation of tyres, it is hardly possible to notice an under-inflation of 50%.

About 50% of vehicles circulate each day with at least one dangerously under-inflated tyre.

(Majority of motorists fail to regularly check their tyres).

We can say that:

- One tyre naturally loses 0.2 bar over 3 months
- 85% of «burst tyres» are the result of an unidentified slow loss of pressure.
- Under-inflation affects directional stability, fuel economy and tyre wear rates.

Under-inflated tyre	Increase of Fuel consumption
0.2 bar	1%
0.4 bar	2% minimum
0.6 bar	4% minimum

Under-inflated tyre	Reduction of tyre life
0.4 bar	10 %
0.6 bar	30 %

AirAware kit can be paid off on a set of 4 tyres.

INFORMATION AVAILABLE HERE

(Sources: Sécurité Routière, cars and tyres manufacturers)

is a complete pressure and temperature monitoring retrofit kit for your 4 tyres.

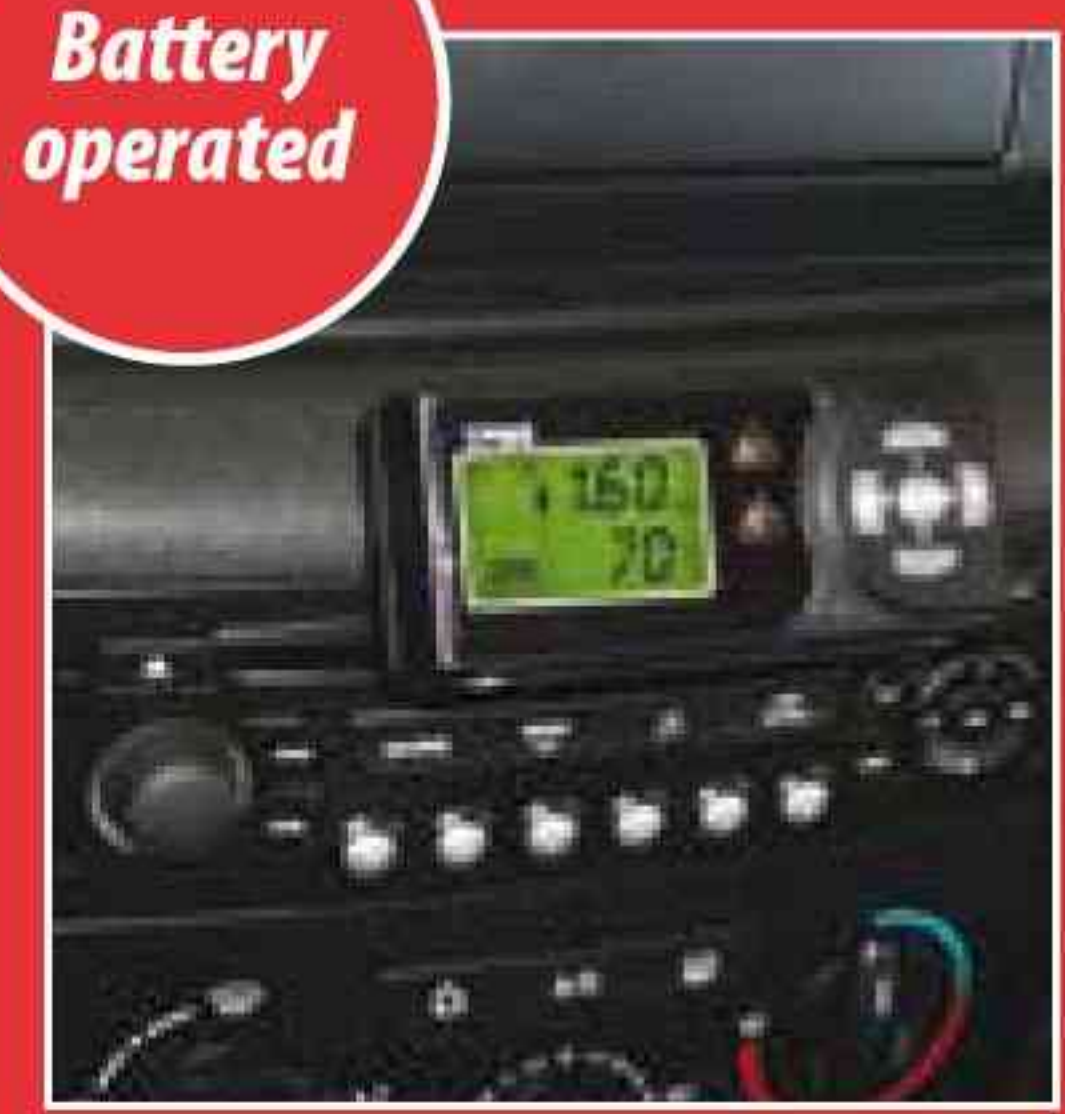

- **Prevents from blow out due to under-inflation**
- **Reduces risk of accident**
- **Participates to fuel economy and better tyre life**
- **Prevents from slow loss of pressure**

Wireless sensors continuously monitor pressure and temperature in each tyre and informs the driver via the dashboard display that can be installed as required. Battery operated system.

AirAware kit is delivered ready to be installed by a professional.

Schrader supplies car manufacturers with the same valves and sensors.

Battery operated
